

PROJECT HALO

UK

This covers the process of headlamp conversion. You should have 6 Rings, 4 Cable Ties and pre stripped wiring harness in the DIY LAMP BOX

PH Harness Colour	Description	Where to	Overview
White	Outer LED +	RED of Outer LED	Projector Side
Red	Middle LED +	RED of Middle LED	Middle
Brown	Inner LED +	RED of Inner LED	High Beam Side
Black	Shared LED -	BLACK of All LEDs	
Blue	Full Beam Signal	YELLOW of High Beam Bulb	
Green	Night Signal	GREY of Sidelight Bulb	
Yellow	Indicator Signal	GREY of Indicator Bulb	

- Outer refers to the side with the Projectors for the dipped beam
- Inner refers to the side closest to the centre grill

Drill a 5-7mm Hole under the main beam side of lamp as shown below, run the multicore cable through and once connections are complete secure both sides of the cable around the hole with the supplied cable ties (allowing a little slack for movement). This will ensure that the cable is not pulled out of the lamps accidentally and shorting out.
